Privacy Policy for SweetSpots

Effective Date: November 8, 2026
Last Updated: November 8, 2026
Contact: getsweetspots@gmail.com

1. Introduction

SweetSpots (“the App,” “we,” “our,” or “us”) explains in this Privacy Policy how we collect, use, disclose, and safeguard information when you use our mobile application (**SweetSpots**). By using SweetSpots, you agree to the practices described here. If you do not agree, please do not use the App.

Guest use. If you use SweetSpots without an account, Firebase Authentication creates a random, pseudonymous guest identifier, and your saved places, collections, collection cover images and share links are stored in our cloud under it. The identifier is kept on your device. If you create an account, your guest content stays with you in that account. If you delete or reinstall the App, sign in to a different account, or lose your device before creating an account, the App can no longer access your guest content. We do not automatically delete it: that content and its guest identifier may be kept on our servers indefinitely. This includes the places you saved with their notes and locations, your collections, collection cover images and share links. A download link to a cover image that was already issued may keep working for anyone who has it. Because guest use has no email address or other contact details, we can't reliably match a later request to a particular guest identifier, so we may be unable to return or delete that content on request. To delete it, use **Settings › Delete Guest Data** while you're still using the guest session.

2. Information We Collect

We collect information as needed to run accounts, sync your content, show maps and location features, and improve and secure the service.

Account and profile

- Email address, username, and password (or equivalent credentials when you use **Sign in with Google**).
- If you use **Google Sign-In**, Google handles authentication according to Google’s terms and privacy policy; we receive information Google shares with us to create or access your account (such as your Google account identifier and email, as applicable).

Location

- **Precise location** when you allow it, to show nearby spots, sort by distance, and support optional **proximity alerts** (geofencing).
- If you enable proximity alerts, the App may use **Always** location permission so iOS can monitor saved regions **while the app is in the background** and deliver local notifications when you enter those regions. If you only grant **When In Use** location, map and distance features may still work, but background proximity alerts may not.
- You can change or revoke location access in your device **Settings**.

Content you create

- Spots, collections, notes, share links, optional **collection cover images** you choose from your **photo library**, and related metadata you provide.

Device and technical data

- Information from your device and our infrastructure partners needed to operate the App—for example IP address, device and OS type, app version, and diagnostic or security signals our services produce.

Advertising and measurement (Meta)

- We integrate the **Meta (Facebook) software development kit** in the App to measure advertising performance and installations (including campaigns on **Instagram** and other Meta placements). This may involve sharing or processing **identifiers and usage-related signals** with **Meta Platforms, Inc.** and its affiliates (for example device identifiers such as **IDFA** where available and permitted, IP address, device characteristics, and app events related to installs or engagement). Measurement may use **Apple's SKAdNetwork** and, where we request it, **App Tracking Transparency** on iOS.
- For more detail on how Meta uses data, see Meta's Privacy Policy and related product documentation.

Product analytics (Google Analytics for Firebase)

- We use **Google Analytics for Firebase**, provided by **Google**, to understand product usage, evaluate features, measure audiences and activation, and assess short-term retention so we can improve SweetSpots.
- Firebase Analytics uses a pseudonymous app-instance identifier and provider-managed technical metadata, such as event time, session information, app and operating-system versions, device class, and locale. SweetSpots analytics is installation-based and is not linked by us to your

SweetSpots account. We do not send Google Analytics for Firebase your SweetSpots user ID, email, username, account identifier, or another account alias.

- We do not send user-created spot or collection names or content, notes, source URLs or source content, precise location, contact or sender data, authentication or notification tokens, or raw error details to Google Analytics for Firebase.
- Google aggregates the analytics events for reporting. This product analytics is separate from the Meta advertising measurement and App Tracking Transparency practices described above; we do not use the Firebase product-analytics data for cross-company tracking or advertising personalization.

Crash reporting and reliability diagnostics (Firebase Crashlytics)

- Release versions of SweetSpots use **Firebase Crashlytics**, provided by **Google**, to collect crash reports and a narrow set of reliability diagnostics so we can investigate and fix app failures.
- Crashlytics reports may include crash stack traces and provider-managed technical information such as app version, operating-system version, device class and architecture, crash time, session identifiers, a Crashlytics installation UUID, and a Firebase installation ID.
- Because SweetSpots also uses Google Analytics for Firebase, Crashlytics may include Analytics breadcrumb logs showing approved app events that occurred before a crash. These breadcrumbs use the same closed event names and limited properties described above; they do not add a SweetSpots account identifier or user-created content.
- SweetSpots does not set a Crashlytics user ID or send Crashlytics your SweetSpots account ID, email, username, spot or collection content, notes, source URLs or source content, precise location, contact or sender data, credentials, or tokens. For approved non-fatal reports, SweetSpots explicitly attaches only fixed feature, operation, failure-stage, and failure-category values.
- We use Crashlytics only for app reliability. We do not use Crashlytics data for advertising, cross-company tracking, or account-level identity.

3. How We Use Your Information

We use information to:

- Provide and maintain accounts, sync content, authenticate users, and secure the service.
- Provide map, distance, and optional proximity-notification features you turn on.
- Store and display your user-generated content, including media you select from your library.
- Deliver optional proximity alerts as local notifications.
- Operate and improve reliability and performance of the App, detect abuse, and comply with law.
- Investigate crashes and selected app reliability failures through Firebase Crashlytics.
- Understand product usage, evaluate features, measure audiences and activation, and assess short-term retention through Google Analytics for Firebase.
- Measure the effectiveness of our advertising and attributions through Meta's SDK and Apple's frameworks, as described above.

4. Retention and Deletion

We retain personal information only as long as needed for the purposes above or as required by law. You may request deletion or help with your data by contacting **getsweetspots@gmail.com**.

Account deletion. Deleting your account in the App permanently deletes your profile, username, saved places, collections, collection cover images, share links and sign-in account. If you used Sign in with Apple, we also revoke SweetSpots' Apple sign-in tokens. Firebase Analytics and Crashlytics retention is described below.

Deletion timing. After a collection cover image is deleted from active storage, our cloud provider keeps a recoverable copy for **7 days**. While in that recovery state, the copy is not served through the App or earlier download links. This does not remove copies already downloaded or cached elsewhere. Deleted database records may remain recoverable in short-term version history for up to **one hour**. We have not enabled database backups and have no retained database backups under our control. These are service recovery windows; the provider's final deletion from its internal systems follows its published deletion process (https://docs.cloud.google.com/docs/security/deletion).

Deletion records. When you delete your account or guest data, we keep a

record containing only the pseudonymous account identifier and the time deletion started. We keep it indefinitely so that other devices still signed in to that account can't recreate content or share links after deletion. It contains no name, email, username or content. When you delete guest data, we may also be unable to remove the guest sign-in record itself. If so, that record keeps the pseudonymous guest identifier and its creation and sign-in times, with no name, email or content.

For Google Analytics for Firebase, event-level and user-level data retention is configured for **two months**, with the setting that resets that retention period on new activity turned **off**. Standard aggregate reports may remain available longer than event-level records. Because SweetSpots does not attach its account identifiers to this installation-based analytics data, deleting your SweetSpots account cannot selectively identify and delete the analytics for that installation. Uninstalling the App also does not retroactively erase events already held by Google. You may contact us with privacy questions or requests, but these limitations may affect what can be identified or deleted.

Google states that Firebase Crashlytics keeps crash stack traces and associated identifiers, including Crashlytics installation UUIDs and Firebase installation IDs, for **90 days before beginning removal from live and backup systems**. Because SweetSpots does not attach its account identifier to Crashlytics reports, deleting your SweetSpots account cannot selectively identify and delete those reports. Uninstalling the App stops future collection from that installation but does not retroactively erase reports already held by Google.

5. Sharing of Information

We **do not sell** your personal information.

We share information with:

- **Google (Firebase / Google Cloud)** — authentication, database, file storage, server-side functions, app security (such as **Firebase App Check**), product analytics through Google Analytics for Firebase, crash reporting and reliability diagnostics through Firebase Crashlytics, and related infrastructure. Our **Cloud Firestore** database is located in Google's **United States multi-region** (Firebase location identifier **nam5**). Other Google services tied to your project may process data in additional data centers or regions as described in Google's documentation.
- **Google (Sign in with Google)** — when you choose that sign-in method, as described in Section 2.
- **Meta Platforms, Inc.** and affiliates — when you use the App, for

advertising and conversion measurement through the Meta SDK, as described in Section 2.

- **Service providers** we engage to host, secure, or support the App, subject to confidentiality and processing terms.
- **Law enforcement or regulators** when required by applicable law or to protect rights, safety, and the integrity of the service.

6. International Data Transfers

Our primary database for SweetSpots is hosted in the **United States** (see Section 5). We are based in **Canada**. Information may be transferred to, stored in, or accessed from **Canada, the United States**, and other countries where we or our providers operate, including **Google** and **Meta**, which may have different privacy rules than your home jurisdiction. Where required by law, we rely on appropriate safeguards or contractual mechanisms for such transfers.

7. Children's Privacy

Our **Terms** require users under **13** to have **parent or guardian consent** before creating an account. SweetSpots is not directed at young children without that consent. If you believe we have collected personal information from a child without appropriate consent, contact **getsweetspots@gmail.com** and we will take appropriate steps, which may include deleting the information.

8. Your Privacy Rights

Depending on where you live, you may have rights under **PIPEDA**, **GDPR**, **UK GDPR**, **CCPA/CPRA**, or similar laws to access, correct, delete, or restrict certain processing, or to object or opt out of some uses. To exercise these rights, contact **getsweetspots@gmail.com**. You may also use device settings (for example location, notifications, or tracking controls on iOS) to limit some collection.

California (CalOPPA-style disclosure): You can use portions of the App without an account where the product allows it; this policy is available in the App's settings (or equivalent legal information area). We will update the **Last Updated** date when we make material changes.

9. Data Security

We apply commercially reasonable technical and organizational measures to protect your information. No method of transmission or storage is completely

secure.

10. Changes to This Policy

We may update this Privacy Policy from time to time. We will revise the **Last Updated** date when we do. For material changes, we may provide additional notice as appropriate (for example an in-app notice or email). Your continued use of the App after the effective date of changes constitutes your acceptance of the updated policy, unless applicable law requires otherwise.

11. Governing Law

This policy is governed by the laws of the **Province of Ontario** and the **federal laws of Canada**, without regard to conflict-of-law rules, except where your local law grants you non-waivable rights.

12. Contact Us
